Instructions for Authors
Henry Ford Hospital Medical Journal

Submission of Manuscripts
Submit the original and two copies of the manuscript and three complete sets of figures in heavy paper envelopes. The manuscript should be accompanied by a covering letter and by permissions to reproduce previously published materials or to use illustrations that may identify subjects. Authors should keep copies of everything submitted. The style of writing used in the manuscript should be consistent with good English usage: clear, succinct, and correct. Papers accepted for publication are subject to editing and revision, if needed, with the author’s approval. Fifty reprints will be made available without charge to the first author of each paper published. Reasonable requests for additional reprints made when the paper has been accepted will be honored if possible.

Manuscripts should be accompanied by a covering letter from the author who will be responsible for correspondence regarding the manuscript. The covering letter should contain a statement that the manuscript has been seen and approved by all authors. The letter should give any additional information that may be helpful to the editor, such as the type of article the manuscript represents in the particular journal, information or publication of any part of the manuscript, and whether the author(s) will be willing to meet the cost of reproducing color illustrations. Include copies of any permissions needed to reproduce published material or to use illustrations of identifiable subjects.

Mail the required number of manuscript copies in a heavy paper envelope, enclosing the manuscript copies and figures in cardboard, if necessary, to prevent bending of photographs during mail handling. Place photographs and transparencies in a separate heavy paper envelope.

Manuscript Preparation
Type manuscript on white bond paper, 20.3 by 26.7 cm or 21.6 by 27.9 cm (8 by 10 1/2 in or 8 1/4 by 11 in) or ISO A4 (212 by 297 mm) with margins of at least 2.5 cm (1 in).

Type manuscript double spaced throughout, including title page, abstract, text, acknowledgments, references, tables, and legends for illustrations.

Begin each of the following sections on separate pages: title page, abstract and key words, text, acknowledgments, references, individual tables, and legends.

Number pages consecutively, beginning with the title page. Type the page number in the upper right-hand corner of each page.

Manuscripts will be reviewed for possible publication with the understanding that they are being submitted to one journal at a time and have not been published, simultaneously submitted, or already accepted for publication elsewhere. This does not preclude consideration of a manuscript that has been rejected by another journal or of a complete report that follows publication of preliminary findings elsewhere, usually in the form of an abstract. Copies of any possibly duplicative published material should be submitted with the manuscript that is being sent for consideration.

References
Number references consecutively in the order in which they are first mentioned in the text. Identify references in text, tables, and legends by Arabic numerals (in parentheses). References cited only in tables or in legends to figures should be numbered in accordance with a sequence established by the first identification in the text of the particular table or illustration.

Use the form of references adopted by the U.S. National Library of Medicine and used in Index Medicus. Use the style of the examples cited at the end of this section, which has been approved by the National Library of Medicine.

The titles of journals should be abbreviated according to the style used in Index Medicus; consult the “List of Journals Indexed,” printed annually in the January issue of Index Medicus.

Try to avoid using abstracts as references; “unpublished observations” and “personal communications” may not be used as references, although references to written, not verbal, communications may be inserted (in parentheses) in the text. Include among the references manuscripts accepted but not yet published; designate the journal followed by “in press” (in parentheses). Information from manuscripts submitted but not yet accepted should be cited in the text as “unpublished observations” (in parentheses).

Instructions for Authors

The references must be verified by the author(s) against the original documents.

Tables
Type each table on a separate sheet; remember to double space. Do not submit tables as photographs. Number tables consecutively and supply a brief title for each. Give each column a short or abbreviated heading. Place explanatory matter in footnotes, not in the heading. Explain in footnotes all nonstandard abbreviations that are used in each table. For footnotes, use the following symbols in this sequence: *, †, ‡, §, ¶, ‡‡, ‡‡‡, ‡‡‡‡... Identify statistical measures of variations such as SD and SEM.

Tables may be omitted if internal horizontal and vertical rules.

Cite each table in the text in consecutive order.

If you use data from another published or unpublished source, obtain permission and acknowledge fully.

Illustrations
Submit three complete sets of figures. Figures should be professionally drawn and photographed; freehand or typewritten lettering is unacceptable. Instead of original drawings, roentgenograms, and other material; send sharp, glossy black-and-white photographic prints, usually 12.7 by 17.3 cm (5 by 7 in) but no larger than 20.3 by 25.4 cm (8 by 10 in). Letters, numbers, and symbols should be clear and even throughout, and of sufficient size that when reduced for publication each item will still be legible. Title and detailed explanations belong in the legends for illustrations, not on the illustrations themselves.

Each figure should have a label pasted on its back indicating the number of the figure, the names of the authors, and the top of the figure. Do not write on the back of the figures or mount them on cardboard, or scratch or mar them using paper clips. Do not bend figures.

Photomicrographs must have internal scale markers. Symbols, arrows, or letters used in photomicrographs should contrast with the background.

Legends for Illustrations
Type legends for illustrations double spaced, starting on a separate page with Arabic numerals corresponding to the illustration. When symbols, arrows, numbers, or letters are used to identify parts of the illustrations, identify and explain each one clearly in the legend. Explain internal scale and identify method of staining in photomicrographs.

Abbreviations

In most countries the International System of Units (SI) is standard or is becoming so. Report measurements in the units in which they were made. Journals may use these units, convert them to another system, or use both.
